

## Guide to This Report

This column includes the survey estimates with the 95% confidence interval for the measure. In this table, for example, for the total population of Utah, 9.1% ( $\pm 1.2\%$ ) reported no health insurance coverage. The 95% confidence interval ranges from 7.9% to 10.3%.

This column is the estimated number of people represented by the measure. It is calculated by multiplying the survey estimate by the number of people in the population. In this example, the estimated number of males reporting the measure is  $113,700 (9.6\% \times 1,181,516)$ . This number is always rounded to the nearest 100 persons.

ey Estimates of Persons Without Health

2003 Utah Health Status Survey, Utah Departmen

The second two columns represent the population distribution for the state of Utah by the designated variable to the left (in the demographic subgroup column). For example, in this table, males make up 50.2% of the total population and account for 1,181,516 of the total 2,354,775 estimated Utah population.

The first column provides the subgroups for which the measure was calculated. A Profile of Utahns Without Coverage

This column provides a distribution of the population represented by the measure by category. It is not a distribution of the total population, only those reporting the calculated measure. This number is calculated by dividing the number of persons in the subgroup reporting no health insurance by the total number of persons reporting no health insurance. For example, in this table, among the total population reporting no health insurance, 53.0% were male (113,700/214,500)and 47.0% were female (100,800/ 214,500).

Several tables in this report span two pages, as seen here. In those instances, the table name and column headings are repeated at the top for clarification. All footnotes for tables appear only once at the bottom of the table.

## A Profile of Utahns Without Coverage

Table 1 (cont). Health Insurance: Percentage of Persons With No Health Insurance Coverage by Selected Demographic Characteristics, Utah Residents, 2003.

1 Population estimates of sex and age groups based on 2002 Baseline Projections, Governor's Office of Planning and Budget, UPED Model System; all others based on the 2003 UHSS and rounded to the nearest 100 persons.

2003 Utah Health Status Survey, Utah Department of Health

- Persons living in households with incomes below 100% of poverty were more likely than others to lack health insurance coverage.
- In general, as poverty level rises, so does the rate of persons with health insurance coverage.

Relevant bullet points are also found after tables where space allows.

2003 Utah Health Status Survey, Utah Department of Health

Plus or minus 95% confidence interval.
Rounded to the nearest 100 persons.

<sup>4</sup> Figures in these columns may not sum to the total because of missing values on the grouping variables. \*\*\* insufficient sample size for calculation of population estimates.
